Assignment 33 – Interactive Dashboard & Tableau Storytelling

Q1 Explain the difference between a Tableau Dashboard and a Tableau Story Point. Give two healthcare-related use cases

Answer:

Tableau Dashboard:

- A dashboard is a collection of multiple visualizations (charts, graphs) displayed in a single screen.
- It helps users compare multiple data views at once.

Tableau Story Point:

- A story is a sequence of dashboards or worksheets arranged to tell a data-driven narrative step-by-step.

Healthcare Use Cases:

1. Dashboard:

- Showing patient count, treatment cost, and outcomes in one screen for hospital monitoring.

2. Story Point:

- Showing Step 1: Patient distribution → Step 2: Cost analysis → Step 3: Outcomes → Step 4: Doctor performance

Ques2-What are Actions in Tableau? Explain how Filter Action can help hospital management analyze patient data

Answer: Action:

Actions are interactive features that allow users to interact with charts.

Filter Action:

- When you click on one chart, it filters data in another chart.

Example (Healthcare):

- **Click on Region = North**
- **Dashboard updates to show:**
 - **Patients only from North**
 - **Cost only for North**
 - **Outcomes for North**

Steps in Tableau:

- 1. Go to Dashboard**
- 2. Click Dashboard → Actions**
- 3. Click Add Action → Filter**
- 4. Select Source Sheet**
- 5. Select Target Sheet**
- 6. Run action on Select**

Ques10 - Based on your visuals, answer:

- 1.Which department generates the highest treatment cost?**
- 2.Which region has more critical patients?**
- 3.What business decisions can hospital management take from these insights?**

Answer:

- 1. The department with the highest treatment cost is Neurology, indicating that this department contributes the most to overall hospital expenses. This may be due to complex procedures, advanced equipment usage, or higher patient volume.**

- 2. The regions with the highest number of critical patients are South and West, both having the highest count. This suggests that these regions may require better healthcare infrastructure, emergency services, or early diagnosis systems.**
- 3. business decisions can hospital management take from these insights :**

- 1. Resource Allocation**

Increase budget and medical resources for Neurology department

Invest in advanced equipment and specialists

- 2. Regional Healthcare Improvement**

Improve hospital facilities in South and West regions

Focus on emergency response systems

- 3. Preventive Healthcare**

Launch awareness programs in high-risk regions

Focus on early detection of diseases

- 4. Doctor & Workload Optimization**

Analyze workload of doctors in high-cost departments

Distribute patients efficiently

- 5. Cost Optimization Strategy**

Investigate why Neurology costs are high

Optimize treatment processes where possible
